EDUCATION

University of Ottawa

Bachelor's, Software Engineering (Summa Cum Laude)

September 2019 - December 2023

GPA: 9.57

SKILLS

Languages: TypeScript, Python, Java, Golang, Kotlin, Bash, HTML, CSS, JavaScript, SQL

Frameworks: FastAPI, Spring Boot, Flask, React.js, Node.js, AngularJS, JUnit, Cucumber, Selenium

Cloud & DevOps: Kubernetes, Docker, AWS, GCP, Azure, GitHub Actions, Jenkins, Artillery, JMeter, HashiCorp Vault, AWS S3

AI & Automation: Claude, OpenAI, Prompt Engineering, AI Agents, MCP, Solace Agent Mesh, Claude Code, Codex, Cursor

Databases: PostgreSQL, DynamoDB, CockroachDB, Redis, Elasticsearch, MongoDB

Observability & Tools: Linux, Prometheus, Splunk, Datadog, Git, REST APIs

PROFESSIONAL EXPERIENCE

Solace

Software Developer, AI

September 2023 - Present

Ottawa, ON, Canada

- Helped develop Solace Agent Mesh, an enterprise-grade framework leveraging event-driven architecture to orchestrate multi-agent AI systems via standardized A2A protocols.
- Architected the Agent Mesh Offline Evaluations tool, empowering customers to evaluate live AI agents asynchronously across varying LLM models, prompts, and custom LLM-as-a-Judge evaluators without modifying production environments.
- Architected end-to-end performance automation frameworks for Micro-integrations and Solace Agent Mesh using k6, Artillery, and cloud APIs. Automated S3 data storage and Confluence graphing to track historical trends, while integrating AI summaries and real-time Slack notifications for rapid regression detection.
- Designed a spec-driven automation framework streamlining onboarding for 15+ cloud micro-integrations (GCP, AWS SQS, AWS SNS, Azure ServiceBus, IBM MQ, TIBCO, and JMS), reducing setup time by 4+ hours per connector.
- Built a custom MCP server orchestrating AI agents to automate the full micro-integration release lifecycle, reducing weekly release time from 3 days to <1 hour.

Nokia

Software Developer Intern

May 2023 - September 2023

Ottawa, ON, Canada

- Designed and implemented automated REST API integration testing pipelines from scratch using Java, Cucumber, and JUnit within a Kubernetes environment, increasing test coverage by 80%.

Twitter

Software Engineering Intern

May 2022 - August 2022

San Francisco, CA, USA

- Developed a one-step automation tool for cluster creation using Bash and Kubernetes, reducing provisioning time by 95%.
- Utilized Python and Prometheus to enhance cluster monitoring by writing custom CQL commands, updating cluster dashboards with comprehensive metrics, and integrating performance tracking capabilities.
- Integrated Splunk logging into CockroachDB clusters, enabling centralized and advanced logging capabilities for effective debugging and performance analysis.

PROJECTS & OUTSIDE EXPERIENCE

QuickAiply - [Link to project](#)

January 2025 - Present

- Created an AI-powered Chrome extension that autofills job applications, answers open-ended questions, and generates customizable, tailored AI cover letters directly on job pages like Lever, Workday, and Greenhouse.
- Built the full-stack platform using React (Vite), FastAPI (Python), Supabase, and TypeScript, deployed on Vercel, with features like 95%+ form autofill accuracy, custom AI prompt support, and intelligent resume selection.
- Designed an in-extension UI for live preview, editing, and downloading of AI-generated cover letters. Integrated OpenAI, Anthropic, and DeepSeek with an optional bring-your-own-API-key setup for privacy and cost flexibility.
- Scaled the free-to-use platform to 30+ community users, generating optimized applications that successfully secured interview call-backs from top-tier companies including Google, Amazon, Stripe, xAI, and Coinbase.
